**DETAILED ACTION**

1. Since this application is eligible for the transitional procedure of 37 CFR 1.129(a), and the fee set forth in 37 CFR 1.17(r) has been timely paid, the finality of the previous Office action is hereby withdrawn pursuant to 37 CFR 1.129(a). Applicant's Appeal Brief submission after final filed on 4/6/2009 has been entered.
2. In light of the newly filed IDS of 5/26/2009, a new rejection of the claims is set forth below.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6, 13-15, 20-25, 27-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Terada et al. (JP 2002-158199).

Terada discloses a cleaning sheet and a method of use, the cleaning sheet comprising a cleaning layer containing an acrylic resin and a urethane resin (see paragraphs 0007-0009). The adhesive layer has a thickness of 5-100 microns and a modulus of 0.25N/10mm (see paragraphs 0011 and 0016), which appears to read on the presently claimed range.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 19, 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Terada as applied to claims 1-6, 13-15, 20-25, 27-28 above, and further in view of Amami et al. (JP 09-129577).

Terada is as set forth in claims 1-6, 13-15, 20-25, 27-28 above and incorporated herein.

Terada does not specify the polyurethane is formed from reacting a polyol and a polyisocyanate before irradiation.

Amami disclose an adhesive sheet for wafer bonding, the adhesive comprising a urethane acrylate system wherein an isocyanate urethane prepolymer is formed by reacting a polyol and a polyisocyanate before irradiation in the presence of acrylate (see paragraphs 0036-0037).

Therefore, it would have been obvious to one of ordinary skill in the art to have employed the urethane acrylate system, as taught by Amami, in the adhesive composition of Terada. This is because Amami teaches that by forming the urethane prepolymer first, it would give adhesive strength to adhere the adhesive to the wafer, and after irradiation the adhesive strength would be reduced and the adhesive would be easily peeled off from the wafer.
